
INSTALLATION INSTRUCTIONS

Large Kontour™ Articulating Array Arm Grommet Series

DISCLAIMER

Milestone AV Technologies and its affiliated corporations and subsidiaries (collectively "Milestone"), intend to make this manual accurate and complete. However, Milestone makes no claim that the information contained herein covers all details, conditions or variations, nor does it provide for every possible contingency in connection with the installation or use of this product. The information contained in this document is subject to change without notice or obligation of any kind. Milestone makes no representation of warranty, expressed or implied, regarding the information contained herein. Milestone assumes no responsibility for accuracy, completeness or sufficiency of the information contained in this document.

Chief® is a registered trademark of Milestone AV Technologies. All rights reserved.

WARNING: Use this mounting system only for its intended use as described in these instructions. Do not use attachments not recommended by the manufacturer.

WARNING: Never operate this mounting system if it is damaged. Return the mounting system to a service center for examination and repair.

WARNING: Do not use this product outdoors.

--SAVE THESE INSTRUCTIONS--

IMPORTANT SAFETY INSTRUCTIONS

WARNING: A WARNING alerts you to the possibility of serious injury or death if you do not follow the instructions.

CAUTION: A CAUTION alerts you to the possibility of damage or destruction of equipment if you do not follow the corresponding instructions.

WARNING: Failure to read, thoroughly understand, and follow all instructions can result in serious personal injury, damage to equipment, or voiding of factory warranty! It is the installer's responsibility to make sure all components are properly assembled and installed using the instructions provided.

WARNING: Failure to provide adequate structural strength for this component can result in serious personal injury or damage to equipment! It is the installer's responsibility to make sure the structure to which this component is attached can support five times the combined weight of all equipment. Reinforce the structure as required before installing the component.

WARNING: Exceeding the weight capacity can result in serious personal injury or damage to equipment! It is the installer's responsibility to make sure the combined weight of all components located on the K4G4X-5X-6X Series mounts up to (and including) the display does not exceed 15 lbs (6.8 kg) per display.

WARNING: The K4G4X-5X-6X Series mounts were designed to mount displays between 19-23" in width. Do NOT install displays smaller than 19" in width or larger than 23" in width!

TOOLS REQUIRED FOR INSTALLATION

PARTS

Table 1: Parts

[illegible]

Assembly And Installation

1. Use four 1/4-20 x 1 1/4" flat head cap screws (E) to secure grommet plate (N) to column (F or G). Make sure longer legs of grommet plate are aligned with the front of column. (See Figure 1)

Figure 1

2. Repeat Step 1 for second column.
3. Locate a flat surface (thickness minimum of 1" to maximum of 5") on which to mount the array assembly.

IMPORTANT ! : Use the numbers provided in the table as a guide to determine distance between columns (F or G). Exact distances may vary slightly with other monitors in order to achieve a level mount.

WARNING: The K4G4X-5X-6X Series mounts were designed to mount displays between 19-23" in width. Do NOT install displays smaller than 19" in width or larger than 23" in width!

NOTE: Column 1 shows monitor "width" not diagonal size.

Monitor Width (in.)	Average Weight (lb)	K4G410 (in.)	K4G510 (in.)	K4G610 (in.)
19	7	52.5	68	69.5
20	8	54	68	72.25
21	8	56.25	68	75.5
22	8.5	57.75	68.75	77.5
23	9	59.25	69.75	77.5

IMPORTANT ! : Mounts must be installed parallel to each other on the desk. (See Figure 2)

NOTE: Table assumes a average display depth of 2.35".

4. If a hole doesn't already exist, drill a hole in desk with a diameter between 1/2" and 3" at desired mounting location. (See Figure 2)
5. Position mount on desk so that center hole of grommet plate (N) is centered over grommet hole. (See Figure 2)
6. Insert grommet screw (M) through grommet hole and thread into center hole of grommet plate (N). (See Figure 2)
7. Tighten grommet screw (M) until grommet base is tightened against underside of desk and mount is securely mounted to desk. (See Figure 2)
8. Repeat Steps 4-7 for to install second column.

Figure 2

9. Carefully manipulate base cover (L) to create an opening large enough to wrap cover around array column. (See Figure 3)
10. Wrap base cover (L) around column and slide it down until base cover fits securely onto grommet plate (N). (See Figure 3)

Figure 3

11. Tighten two socket head cap screws to secure column arms (F or G) at desired height. (See Figure 4)
12. Install column cap (K) to column (F or G). (See Figure 4)

Figure 4

13. Repeat Steps 9-12 for second column.
14. Hang right and left array arms (AA and BB) onto column arm (F or G) faceplates using the mounting tab on the faceplate. (See Figure 5)

Figure 5

IMPORTANT ! : Connect faceplates to the outer array arms as shown in Figure 5 when installing K4G410/420/510/520 mounts. Connect faceplates to the inner array arms when installing K4G610/620 mounts. Minor adjustments to the connection location may need to be made in order to compensate for sagging. See Display Leveling Section for details.

15. Use two #10-32 x 5/16" button head cap screws (A) to loosely secure column arms (F or G) to outside arrays (AA and BB). (See Figure 6)

IMPORTANT ! : Do not tighten screws at this time!

Figure 6

16. Insert array connector (H) [K4G410/420 models] or connectors pre-installed on both end of center plates (CC or DD) into left and right array arm openings. (See Figure 7)
17. Slide array plates (J) into grooves on back of array arms, lining up holes on plates with holes in arms. (See Figure 7)

Figure 7

18. Use two #8-32 x 1/2" flat head cap screws (D) to secure each array arm to connector plates. (See Figure 8) and (See Figure 9)
19. Use four #10-24 x 1 1/8" button head cap screws (C) to secure array arms (AA and BB) to connector plates and brackets. (See Figure 8) and (See Figure 9)

Figure 8

Figure 9

20. Use four #10-32 x 1" button head cap screws (B) to secure two handles (EE) to array arms (AA and BB) or K4G6X center plate (DD). (See Figure 9)

NOTE: Handles attach to right and left arrays (AA and BB) for all K4G4 and K4G5 models. Handles attach to K4G6X center plate for K4G6X models.

Figure 10

Display Installation

WARNING: Exceeding the weight capacity can result in serious personal injury or damage to equipment! It is the installer's responsibility to make sure the combined weight of all components located on the K4G4X-5X-6X Series mounts up to (and including) the display does not exceed 15 lbs (6.8 kg) per display.

CAUTION: Using screws of improper size may damage your display! Proper screws will easily thread into display mounting holes.

NOTE: Supplied screws (R1, R2 and R3) may not fit properly for all displays. See display's operating instructions for details.

Flush Mounting Holes

1. Position faceplate in desired mounting position. Adjust as required before proceeding. See Height Adjustment Section for details.
2. Using Phillips screwdriver, carefully install two M4 x 12mm Phillips pan machine screws (R3) into the *upper* mounting holes on the display. Thread screws completely into display, then back out 3 complete turns. (See Figure 11)

Figure 11

3. Pick up and align display so that screws (R3) (installed on the back of the display in the previous step) fit into the mounting holes on the faceplate. Lower the display firmly into place. (See Figure 11)

- Using Phillips screwdriver, install two M4x12 mm Phillips pan machine screws (R3) through the *lower* mounting holes on faceplate into the display. (See Figure 12)

Figure 12

- Tighten all four screws (R3). Do not over-tighten!

NOTE: If roll adjustment is desired for center faceplate, do not tighten screws.

- Repeat Steps 1-5 for other displays.
- Proceed to Cable Management Section.

Recessed Mounting Holes

NOTE: If faceplate does not fit into recessed area of display, proceed with the steps in this section.

- Determine depth of recessed mounting holes relative to back surface of display (against which faceplate will contact).
- Select proper length spacer and screw from table below:

NOTE: All spacers used should be the same length. If the recess depths result in multiple spacer lengths, then select the longer spacer.

IF recess DEPTH is:	THEN use spacer:	AND screw:
3/8" or less	R4 (3/8" long)	R2 (M4 x 20mm)
More than 3/8" up to and including 3/4"	R5 (3/4" long)	R1 (M4 x 30mm)

CAUTION: Using screws of improper size may damage your display! Proper screws will easily and completely thread into display mounting holes.

- Using Phillips screwdriver, carefully install two selected screws (R1 or R2) through selected spacers (R4 or R5) into the *upper* mounting holes on the display. Thread screws completely into display, then back out 3 complete turns. (See Figure 13)

- Pick up and align display so that screws (R1 or R2) (installed on the back of the display in the previous step) fit into the mounting holes on the faceplate. Lower the display firmly into place. (See Figure 13)

Figure 13

- Slide two remaining selected spacers (R4 or R5) in between faceplate and display, positioning them over the *lower* two mounting holes. (See Figure 14)
- Install two remaining selected screws (R1 or R2) through *lower* two mounting holes on faceplate, selected spacers (R4 or R5) into the *lower* mounting holes on the display. (See Figure 14)

Figure 14

- Tighten all four screws. Do not over-tighten!

Adjustments

Pivot Adjustment (Column Arm)

1. Use handles (EE) to extend or collapse column arms as desired. (See Figure 15)
2. (Optional) Loosen or tighten column arm pivot tension screws as desired to increase or decrease pivot tension. (See Figure 15)

Figure 15

Height Adjustment

1. Loosen socket head cap screws holding column arm to column. (See Figure 16)
2. Adjust column arm to desired height. (See Figure 16)
3. Tighten socket head cap screws to lock column arm's position. (See Figure 16)

NOTE: The height on both columns should be adjusted simultaneously to ensure a level mount.

Figure 16

Faceplate Assembly Removal

1. Remove socket head cap screw from bottom of faceplate assembly. (See Figure 17)
2. Slide out removable plate from bottom of faceplate assembly. (See Figure 17)

Figure 17

3. Remove faceplate assembly from array arm. (See Figure 17)

To Reattach Faceplate Assembly

4. Place faceplate assembly on array arm at desired mounting position. (See Figure 18)
5. Slide removable plate back into slot at bottom of faceplate assembly. (See Figure 18)
6. Reinstall socket head cap screw removed in Step 1 to secure faceplate assembly to array arm. (See Figure 18)

Figure 18

Lateral Shift

1. Loosen knob on top of faceplate assembly until faceplate can slide freely along array. (See Figure 19)
2. Adjust lateral position as desired. (See Figure 19)
3. Tighten knob to secure lateral position. (See Figure 19)

Figure 19

Pitch/Roll/Yaw Adjustment

1. Loosen knob on top of faceplate assembly. (See Figure 20)
2. Adjust pitch, roll and/or yaw as desired. (See Figure 20)
3. Tighten knob to secure desired faceplate position. (See Figure 20)

Figure 20

Figure 21

Cable Management

1. Install 4 1/2" cable covers (Q) to array arms. (See Figure 21)
2. Install two 4 1/2" cable covers (Q) to single tier column arms (F) or four 9 1/2" cable covers (P) to dual tier column arms (G). (See Figure 21) or (See Figure 22)

3. Route cables from display through cable management covers (Q) on array arms as desired. (See Figure 23)
4. Route cables along swing arms, using cable ties (Z) to secure cables to arms. (See Figure 23)
5. Route cables through cable management covers (P or Q) on columns as desired. (See Figure 23)

Dual Tier Models (K4G420/520/620)

Figure 22

Figure 23

Display Leveling

If the array sags after attaching displays, adjust the connection point to the arms until an even mount is achieved. Refer to the appropriate section depending on whether the array sags to the inside or the outside. (See Figure 24)

Figure 24

For Sag to the Outside

1. Loosen two screws holding column arms to outer array arms. (See Figure 25)
2. Lift up on array arm slightly and slide connection plate towards the outside of the array until an even mount is achieved. (See Figure 25)
3. Tighten two screws holding column arms to outer array arms. (See Figure 25)

Figure 25

For Sag to the Inside

4. Loosen two screws holding column arms to outer array arms. (See Figure 26)
5. Lift up on array arm slightly and slide connection plate towards the inside of the array until an even mount is achieved. (See Figure 26)
6. Tighten two screws holding column arms to outer array arms. (See Figure 26)

Figure 26

NOTE: If the mount still sags, it may be necessary to move one or both of the connection points to the other bar of the array.

IMPORTANT ! : Remove all displays from array prior to moving the faceplate connection from one array bar to the other.

Our Mounts. **Your Vision.**
